SUMMARY

Senior SRE / AI Infrastructure Engineer with 10+ years of experience building and operating Kubernetes platforms, cloud infrastructure, CI/CD, observability systems, and developer platforms.

Strong hands-on experience with **Kubernetes, AWS, Ansible, GitOps, Python, Prometheus/VictoriaMetrics, Elasticsearch, and Linux**, combined with recent work on **AI infrastructure, LLM applications, RAG, agentic systems, LangGraph, and MCP**.

Focused on building reliable, automated infrastructure and applying AI to operational workflows, including incident analysis, observability, infrastructure automation, and developer productivity.

CORE SKILLS

AWS	Kubernetes	Ansible	Promethues	LangGraph	Python	Juniper
EKS	Helm	Kubespray	ArgoCD	LangChain	Django	Firepower
OpenStack	ArgoCD	Bash	VictoriaMetrics	RAG	Redis	pfSense
Ceph	FluxCD	Python	Grafana	MCP	RabbitMQ	HAProxy
	Docker		Elasticsearch	LLM Agents	Celery	Nginx
	GitOps		Zabbix	vLLM	GitLab CI/CD	PKI

PROFESSIONAL EXPERIENCE

Senior SRE / AI Infrastructure Engineer (Contract)

May 2023 – Present

[Nethightech](#) Company, Portugal Lisbon

- Architected a scalable service on **Amazon Web Services**. utilizing **EC2 Auto Scaling, Elastic Load Balancing, S3, DynamoDB, CloudWatch**.
- Engineered and executed **AWS EKS** Kubernetes cluster provisioning using **Terraform** reducing infrastructure deployment time.
- Automated **Kubernetes** cluster provisioning using **Kubespray** and Bash scripting, significantly reducing deployment time and operational overhead ([Github](#)).
- Accomplished **HAProxy** training Course ([Github](#), [YouTube](#)), boosted content delivery through documentation and videos ([RestAPI](#), [Django](#) as backend).
- Established **GitLab, Kustomize, Flux**, to establish automated deployment process, reducing application delivery time.
- Developed backend services and automation tools using **Python and Django REST Framework (DRF)**
- Built asynchronous workflows using **Celery** and **RabbitMQ** for scalable task processing
- Improved the index page loading time with lazy fetching the content and caching the apis with **Redis**
- Setting up Continuous Integration (CI) and Continuous Delivery (CD) Pipelines using **GitLab**
- Provided **Prometheus** visualization capabilities with **Grafana**
- Utilized Docker coupled with **Traefik** as a reverse-proxy and a load-balancer to achieve Continuous Delivery goal on high scalable environment

OpenStack DevOps Engineer

Sep 2021 – Dec 2022

ArcFava

- Architected and constructed a flexible Infrastructure using **OpenStack** and **Ceph**, advancing network management by 40%.
- Scaled **Redis** infrastructure from single-node to a high-availability cluster, enhancing system reliability by 70% and enabling full horizontal scalability.
- Engineered a resilient **RabbitMQ** cluster, replacing the single-node setup to improve message throughput, system stability, and scalability by 80%.

DevOps Engineer

Apr 2020 - May 2021

Mahsan

- Refined **Python unit** tests in the **CI/CD** cycle, optimizing code management and productivity by 100%.
- Automated synchronization between **Netbox** and **VMware vCenter** using **Python**, leading to a 100% growth in monitoring processes.
- Integrated a suite of advanced monitoring utilities including **Zabbix, Grafana, Prometheus, cAdvisor, InfluxDB, and Telegraf**.
- Implemented and maintained Service Level Agreements (**SLAs**) reports for 50 web services in Zabbix.

Didehbannet

- Conducted **risk management analysis** and presented potential disaster scenarios to the CEO, highlighting the network infrastructure's vulnerabilities. Successfully secured 100% budget of a new server room.
- Launched an image layer in low-cost storage using **Kubernetes** and **Docker**, freeing up massive space in **high-priced storage**.
- Revolutionized the core network and **WAN edge firewall (Juniper, FortiGate)**, increased security and stability.
- Strengthened network **Layer 2 LAN security** (port security, DHCP snooping, ARP inspection, IP source guard).
- **Automated** network management and configuration using **Python**, improving overall efficiency and reducing manual effort.
- Planned for a **disaster recovery site** with **VMware SRM** and **NSX**.

SELECTED PROJECTS

Agentic Kubernetes Root Cause Analysis Platform

Python · LangGraph · MCP · Kubernetes · Elasticsearch · VictoriaMetrics · LLM – [Github repository](#)

- Built an agentic **Kubernetes Root Cause Analysis platform** that investigates alerts using live metrics, logs, Kubernetes state, and historical incident data.
- Designed a **LangGraph-based autonomous workflow** for planning investigations, collecting evidence, verification, and RCA generation.
- Integrated infrastructure and observability capabilities through **MCP tools**, including Kubernetes, VictoriaMetrics, and Elasticsearch.
- Implemented evidence-driven RCA to distinguish observed facts from inferred causes and reduce unsupported conclusions.
- Added incident-history retrieval using **RAG** to correlate current failures with previous incidents.
- Designed structured RCA reports containing affected workloads, pod/node status, events, metrics, logs, and supporting evidence.

Agentic Job Search / Career Automation

Python · LangGraph · LLM · vLLM · Tavily – [Github repository](#)

- Built an agentic job-search system that evaluates engineering positions against a structured candidate profile.
- Implemented **Planner → Verifier → Scoring** workflow using LangGraph.
- Integrated web search and local **OpenAI-compatible LLM infrastructure** for job discovery and evaluation.
- Designed candidate/job matching around Kubernetes, SRE, DevOps, cloud, AI infrastructure, and agentic engineering requirements.

EDUCATION

Bachelor's Degree in Information Security Aug 2016 - Jun 2018

Kerman - Iran

University of Applied Science and Technology (UAST)

LANGUAGES

Persian

English

German

Certifications
